

$$\hat{A} = \begin{pmatrix} 1 & 10 \\ \delta & 1 \end{pmatrix}, \quad \delta > 0$$

Составим характеристическое уравнение $\Delta(\hat{A} - \lambda\hat{E}) = 0$:

$$(1 - \lambda)^2 - 10\delta = 0$$

Тогда:

$$\lambda_{1,2} = 1 \pm \sqrt{10\delta}$$

$$\varepsilon(\delta) = 1 + \sqrt{10\delta}$$

$$\kappa(\delta) = \frac{d\varepsilon(\delta)}{d\delta} = \frac{\sqrt{10}}{2\sqrt{\delta}}$$

$$\kappa(10) = \frac{1}{2}$$

$$\kappa(0,1) = 5$$
